

## Amphenol Sachsenkabel leverages European expertise to deliver advanced fiber-optic solutions

**Gornsdorf/Germany, January 07, 2026** – Amphenol Sachsenkabel, formerly LWL-Sachsenkabel, leverages European development, engineering, and manufacturing capabilities to deliver high-performance fiber-optic solutions for data centers, industrial applications, and telecommunications across Europe. The new brand reflects a strategic alignment and the decision to join forces more closely with other Amphenol businesses worldwide.

For customers, this means greater planning certainty, shorter time-to-market, and the ability to reliably implement both customized prototypes and complex large-scale projects with end-to-end execution reliability throughout the entire project lifecycle. The solutions portfolio includes high-performance distribution and fiber-management systems such as C2E and HYPE for highly scalable data-center infrastructures, robust fiber-optic connectors for demanding outdoor applications, as well as high-density cabling solutions based on MPO and SN technology. The portfolio is further complemented by OEM and customized solutions for industrial, telecommunications, and data-center applications.

Amphenol Sachsenkabel combines local consulting expertise with product development and manufacturing in Germany, while leveraging the global supply chains and extensive product portfolio of the Amphenol Group. The new brand name represents a consistent step in a market characterized by strong growth and increasing complexity. For customers, this delivers scalability, end-to-end execution reliability, and dependable supply chains in an increasingly demanding environment.

“With the new brand, we emphasize our international orientation and strengthen our role as a European partner for our customers within the global Amphenol network. We provide innovative, high-quality fiber-optic solutions and position ourselves as a local engineering and manufacturing partner. This enables us to support our customers with both tailored prototypes and complex large-scale projects at the highest quality level,” says Dr. Michael Müller, General Manager of Amphenol Sachsenkabel.

### About Amphenol Sachsenkabel

Amphenol Sachsenkabel is a European provider of fiber-optic infrastructure solutions, fiber management systems and customized cabling solutions for data centers, industrial applications and telecommunications. With development and manufacturing sites in Germany and North Macedonia, the company combines European engineering and manufacturing expertise with short supply routes and high project flexibility.

As part of the Amphenol Corporation, Amphenol Sachsenkabel enhances this profile through access to a global technology and product portfolio as well as robust international supply chains, enabling scalable fiber-optic solutions from customized prototypes to complex large-scale projects.
